

26/03

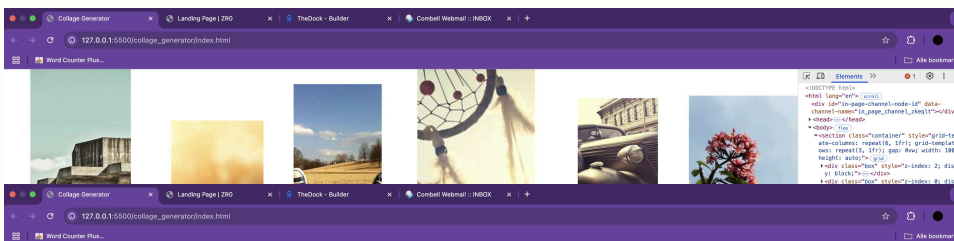

I received some new feedback that the grid should have some extra functionality, first of all I had to add the functionality of being able to toggle if the first row of an element should only have a positive offset on the Y-axis. Because else it could happen that this was overlapping the text. I also had to add some functionality where the user could have more control over the size of the scaling of the images.

```
const gridFormat = true;
const paramOffsetX = 40;
const paramOffsetY = 40;

const paramScale = {min:1, max:1.5};
//const paramScale = [0.1,0.1,0.1,1];

const firstRow = true;
const cleanCut = false;
const boxAspectRatio = "1 / 1";
const GapXaxis = "0vw";
const GapYaxis = "0vw";
const ContainerWidth = "100vw";
```

scaling options

firstRow = false

firstRow = true
